

## Ask yourself these questions...

1. When you turn on a light in your home, do all of your lights come on? When you turn on a faucet in your kitchen do the faucets in the bathrooms start to run water? Of course they don't. So why do we waste energy and comfort on conditioning areas that are unoccupied?
2. Do you sleep at a different temperature than is maintained in the bedroom during the day?
3. Are certain areas such as rooms upstairs, west facing or north facing rooms uncomfortable?

## SmartZone™ offers these benefits to you in your home

- Backed by a limited 5 YEAR Warranty on materials
- Maintain different temperatures in every room
- Maintain the same temperature in all rooms
- Save energy in rooms that are not in use
- HVAC systems work less, last longer

# SmartZone™

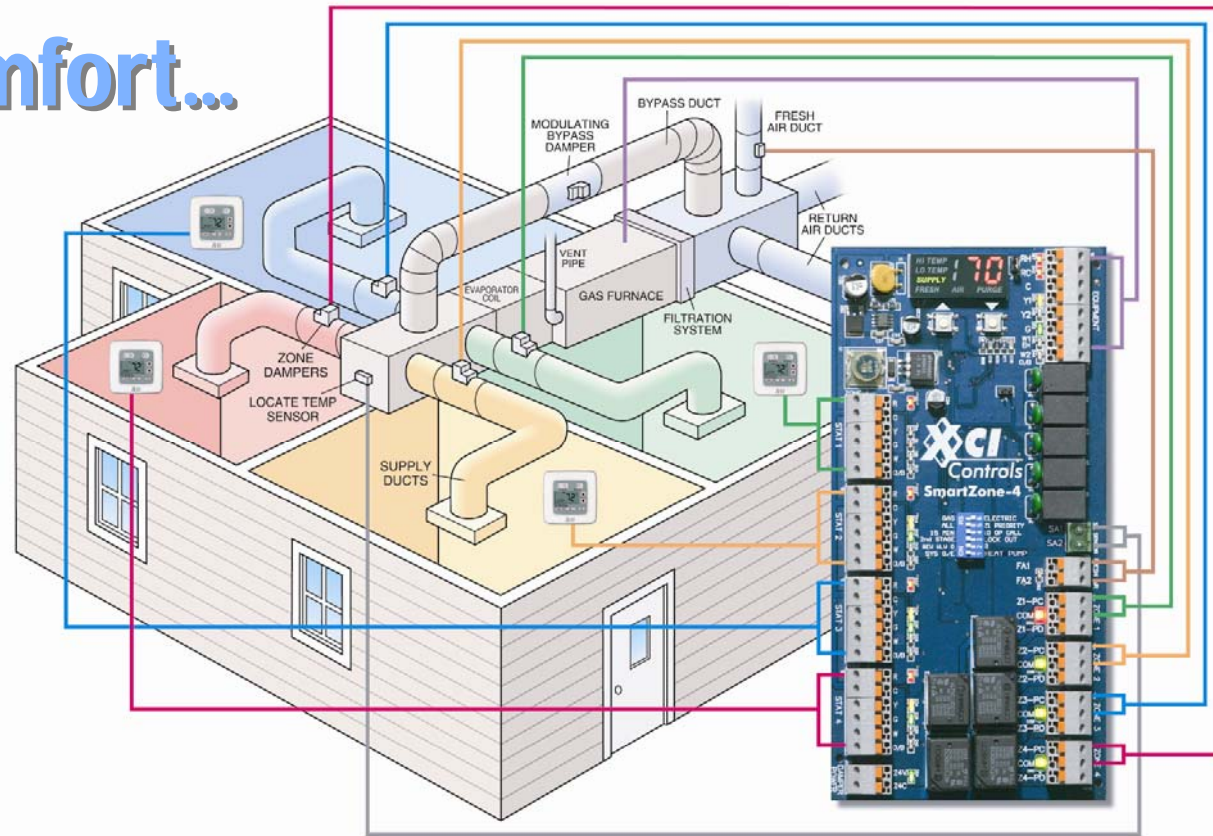

- Control each space in your home
- Choose your temperature
- Condition only the areas used
- Save energy with one system

# Customize your Comfort...

Large custom kitchens can require a thermostat and lots of cooling when in use, but only when in use. Today's modern kitchens have large capacity gas burners, double ovens, bread warmers, large refrigerators, and last but not least high volume exhausters that can exhaust the whole house in a matter of minutes. With several work stations, several cooks in today's kitchen can require lots of cooling.

Entertainment areas require a thermostat and lots of conditioning, but only when entertaining. Consider the cooling required with friends and large picture windows.

# ... Save Energy Dollars...

Today's custom homes may offer a bonus room. This area may have walls that are exposed to attic or basement conditions. These rooms will lose and gain heat at a different rate than the rest of the home.

In your Master Bedroom, control temperature and humidity in the evening or all day long with a thermostat and SmartZone.

Special Rooms such as the home theater may lose and gain heat at a different rate when in use. Save money when this room is not in use.

# ...Simplify your Control
